

“A picture is worth a thousand words.”

This below photo was taken on Upper Beaver Creek Drive on Monday morning 03/21/2022!

The fiber backbone is going in on Upper Beaver Creek, Log Cabin and then Elk Valley Road. The equipment cabinet to receive the Internet connection and “light up” the backbone will be installed on Elk Valley as well. The plan will then be to proceed installing the backbone coming on down Lower Beaver Creek and the feeder side roads as they go. Fiber connecting homes to the backbone will come later when the mud season is behind us.

I am pleased to say it is finally happening! Thanks again to all for your patience.
